

Mauritius 2050 Pathways Calculator
(Version 1)
Home temperature

With a rise in temperature as a result of climate change, air conditioning in Mauritian household is gradually increasing.

Definition of trajectories

In version 1 of the Mauritius 2050 Pathways Calculator, the four levels for ambient temperature are defined as follows:

Level 1	Level one assumes that maximum room temperature increases to 29.02 °C in 2050, which represents a 1.46°C increase on 2010.
Level 2	Level two assumes that maximum room temperature increases to 28.69 °C in 2050, which represents a 1.13°C increase on 2010.
Level 3	Level three assumes that maximum room temperature increases to 28.41 °C in 2050, which represents a 0.85°C increase on 2010.
Level 4	Level four assumes that maximum room temperature increases in 2050 remains the same as in 2010, that is, 27.56°C.
